```
The present amino acid sequence is the mouse lymphoid derived dendritic cell adhesion molecule, LDCAM. It is found on lymphoid derived dendritic cells and displays homology to adhesion molecules, B7-1 and cyroplasmic region of B7-L1. Mouse LDCAM is found on whole embryo, testes, triple negative cells murine splenic and lymph node CD8+, S49.1 and dendritic cells. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B7L-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and as quality control reagents of LDCAM binding proteins. LDCAM may be used for treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                or

The present invention relates to 12 secreted human proteins and the nucleotide sequences encoding them. The polynucleotide sequences given in AAA80606-A80623 encode the 12 secreted protein sequences given in AAA80606-A80623 encode the 12 secreted proteins have various activities of the human secreted proteins have various activities of eppendent on the tissues in which they are expressed. Examples of the activities of the proteins include: immunosuppressant; anti-inflammatory; antiarthritic; antirhematic, dermatchlogical; antiproliferative, antiarthringal activity. The proteins, polypeptides, agonists and antifungal activity. The proteins, polypeptides, agonists and conditions examples of which include: immune disease, disorders and conditions examples of which include: immune disease, Addison's disease and nephritis; dermatitis, and multiple sclerosis; inflammatory disorders e.g. inflammatory bowel disease, crohn's disease and nephritis; hyperproliferative disorders e.g. cronary arteriosclerosis and myocarditis; cancer e.g. melanoma and lymphoma. The proteins and polynucleotide sequences may also be used in wound healing proteins and polynucleotide sequences may also be used in wound healing that and protein sequences are represented in sequences AAA80616 and AAB2566 Sequences AAA80677-A80682 represent genes related to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated nucleic acid molecules encoding human secreted proteins are used for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

The present sequence is a novel human cell surface receptor protein (HCSRP) designated HCSRP-8. The nucleotide sequence was identified in Incyte Clone 312266 from the cDNA library LUNGNOTO2, which was made from Incyte Clone substance. A number of Incyte Clones were used to assemble the consensus sequence. BLAST analysis showed that the sequence is homologous to immuno-superfamily protein B12 3177942. HCSRP and its antagonist are useful for preventing or treating disorders associated with decreased or increased expression or activity of HCSRP. Such disorders include cancers such as leukaemia and melanoma, immune disorders include cancers such as leukaemia and atherosclerosis, bacterial and parasitic infections and neuronal disorders such as a kathesiar's disease, multiple sclerosis and epilepsy.

Polynucleotides encoding HSCRPs may be used as hybridisation probes to diagnose these conditions. Anti-HCSRP antibodies may be used as magnosists, as a targeting or delivery mechanism for bringing pharmaceutical agents into contact with cells or tissues expressing HCSRP and for diagnosis of HCSRP-related disorders. HCSRP and its catalytic or mumunogenic fragments are useful for drug screening using libraries of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human cell surface receptor protein and polynucleotide useful for diagnosis, prevention and treatment of cancer, immune disorders, infection and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ů
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 442;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lal

```
The present amino acid sequence is the human lymphoid derived dendritic cells and displays homology to adhesion molecules, B7-1 and cytoplasmic cells and displays homology to adhesion molecules, B7-1 and cytoplasmic region of B7-Li. Human LDCAM is expressed in breast, retina, feetal liver, spleen and heart, lung, muscle, placenta, thyroid and lung carcinoma. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B7L-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and as quality control reagents of LDCAM binding proteins. LDCAM may be used for treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for prevention or reducing the effect of organ and bone marrow transplant rejection and for modulating T cell immune responses. LDCAM polypeptides may also be used as carriers for delivering agents attached to T cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    H

The invention relates to an isolated polynucleotide (I) comprising one of 245 sequences (ABQ93288-ABQ93332). Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).
(I), (II) and (III) are useful for diagnostic evaluation of disorders.
(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral

                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for detecting cell proliferative disorder associated with tumour suppressor lung cancer 1 (TSLC1) in a subject. The method comprising contacting a cell component of a proliferating cell with a reagent that detects level of the cell component in the proliferating cell and determining modification in the component in proliferating cell as compared with a healthy cell, where modification indicates disorder associated with a healthy cell, where modification indicates disorder associated with TSLC1. The method is useful for detecting a cell proliferative disorder (e.g. liver, lung or pancreatic cancer) associated with tumour suppressor lung cancer (TSLC1) in a subject. The invention is useful in gene therapy and for treating a cell proliferative disorder such as lung cancer (human non-small cell lung cancer), liver cancer (hepatocellular cancer cancer associated with modification of TSLC1 production, where a reagent which modulates (preferably, increases) TSLC1 level in the cells, is employed. The present sequence is human TSLC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TVLVPPRNLMIDIQKDTAVEGEEIEVNCTAMASKPATTIRWFKGNTELKGKSEVEEWSDM 198

The invention relates to an isolated nucleic molecule that is at least CC 59% identical to 18 human cDNA sequences representing 12 novel genes cended proteins or a polyvucteotide fragment of the cDNA.

Concoding secreted proteins or a polyvucteotide fragment of the cDNA.

CC defined in the specification, its species homologue, a variant or allelic variant of the polyvucteotide having a Dolynucleotide capable of the polyvucteotide to a polymucleotide capable of the polyvucteotide sequence of only A or T residues. Also included are secreted polypeptide (comprising a sequence of only A or T residues 15% correction an uncleated are secreted polypeptide fragment, domain, epitope, full-length corresponding to the only preptide fragment, domain, epitope, full-length protein, variant, allelic variant or species homologue), antibodies that specifically bind to the polypeptides diagnosing, treating, preventing or amaliorating a medical condition by administering the polyvucteotide corresponding to the cDNA sequence and activity in a biological assay (by expressing the corresponding to the cDNA sequence and activity, in a biological assay (by expressing the cDNA sequence in a cell, isolating the supernatant, and detecting an activity in a biological assay (by expressing the condition, such as cancer, inflammation and other immune diasorders, neurological condition, for preventing, treating, or ameliocating a pathological condition, such as cancer, inflammation and other immune disorders, neurological assay and isolation, such as cancer, inflammation and other immune condition, such as cancer, inflammation and other immune crowners, neurological probes for differential identification of the restriction mapping. The polypeptides and antibodies are useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and antibodical sare also useful for preventing immunological probes for differential identification of the restriction anapping the present is a secreted protein of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       138

```
the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the rappy). The sequence presented is a human protein (shown in Table 2 of the specification, but was obtained in electronic form directly from WIPO at fip.wipo.int/pub/published_pct_sequences.

The invention traders to identifying (Wil a candidate pay pathway in polypeptide (human orthologue of genes that modify the p53 pathway in polypeptide (human orthologue of genes that modify the p53 pathway in prospectide (human orthologue of genes that modify the p53 pathway in consolidating with a test agent under conditions, where but for the presence of the test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator (CC contacting a cell defective in p53 function with a candidate modulator in a mammalian cell (comprising contacting the cell with an agent that specifically binds on HM polypeptide comprising an HM amino acid contacting an a patient (comprising contacting the cell with an agent that a specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a from the patient, (b) contacting the sample with a probe for HM contacting the patient, (b) contacting the sample with a probe for HM contacting the results with a control; and (d) determining whether the comparison indicates a likelihood disease). (M1) is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 % expression level. CM modulators identified by (M1) are useful in a variety of diagnostic and therapeutic applications, where disease or disorder prognosis is related to the p53 function of the cell; so that that contact prognession colliferation of isorders (c) the p53 pathway of a cell, thus restoring the p53 pathway of a cell, thus restoring conditiention of the cell; so that the cell cycle. (M2) and (M3) are also useful for modulating the p53 pathway of a cell, and (M3) are also useful for modulating the p63 pathway such as angiogenic, and colliferation of the cell cycle. (M2) and (M3) are also useful for treating defects in the p53 pathway such as angiogenic, appoptotic or cell proliferation disorders disorders. The p63 pathway such as 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid sequence, or its albelic variant, a fragment of the DDNA sequence, or its fragment, domain, epitope or species homologue. The nucleic acid is useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer, liver discorders such as hepatitis or neural discorders such as Alzheimer's disease. The present sequence represents the amino acid sequence of a novel human secreted protein associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PNRQTIYFRDFRPLKDSRFQLLNFSSSELKVSLTNVSISDEGRYFCQLYTDPPQESYTTI 138
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

The invention relates to identifying (M1) a candidate p53 pathway

Example 2; Page 469-470; 678pp; English.

```
antiapoptotic; p53 pathway; breast cancer; colon cancer; kidney cancer; lung cancer; ovarian cancer; angiogenesis; cell cycle; apoptotic disorder; cell proliferation disorder.
                                                                                                                                                                                                                                                                                                           Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53 pathway in Drosophila.
                                                                                                                                                                                                                                                                  Funke RP;
                                                                                        Human; p53 modifier; cytostatic; cancer; cytostatic; antiangiogenic;
                                                                                                                                                                                                                                                                  Ď,
                                                                                                                                                                                                                                                                  Ë
                                                                                                                                                                                                                                                                  Belvin M, Francis-Lang H,

The invention relates to identifying (M1) a candidate p53 pathway condulating agent, by contacting an assay system comprising a purified HM collypeptide (human orthologue of ganes that modify the p53 pathway in Drosophila) or nucleic acid with a test agent under conditions, where but correct the presence of the test agent. The system provides a reference activity, and detecting a test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator contacting a cell defective in p53 function with a candidate modulator contacting a cell defective in p53 function with a candidate modulator contacting the cell with an agent that specifically binds to a HM polypeptide comprising an HM amino acid sequence, where p53 function is restored, modulating (M3) a p53 pathway in a mammalian cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) contacting the patient; (b) contacting the sample with a probe for HM expression; (c) comparison indicates a likelihood disease). (M1) is useful contacting modulators of the p53 pathway. A probe for HM expression is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 % expression level. (c) in a patient, where the cancer has greater than 25 % expression level. (c) confidentified by (M1) are useful in a variety of diagnostic and therapeutic applications, where disease or disease or disease or cell conditating the p53 pathway of a cell, thus restoring the p53 function of the cell, so that the cell undergoes normal condition of the cell, so that the cell undergoes normal condition or prograssion the p53 pathway of a cell, thus restoring the p53 pathway such as angiogenic, also useful for treating defects in the p53 pathway such as angiogenic, also useful sor treating defects in the p53 pathway such as angiogenic, represents a hum
Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53
                                                                                                                                                                                                                                                                                                                             Example 2; Page 557-559; 678pp; English.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polymetides or their antibodies. The polynucleotide or the compound that activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more polymetides or their antibodies. The polymucleotide or the compound that in usual segmental nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed the specification) which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed the prin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polymucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a RRO protein having homology to complement proteins may be used in inflammatory responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TVLVPPRNLMIDIQKDTAVEGEBEVNCTAMASKPATTIRMFKGNTELKGKSEVEEWSDM 196

New human nucleic acids encoding secreted and transmembrane polypeptides which are designated as PRO polypeptides are described The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 61, P
